

STOHEX is a Motorola S record to Intel HEX conversion filter. If you have a Motorola S record file, before you can use pgmx, you must convert the file to INTEL HEX. This is simply done as follows:

```
dos_prompt>STOHEX < Your_S_record_filename > output_filename.HEX
```

Remember to use .HEX for the output filename extension. Don't forget the routing operators, < and >. ERRORLEVEL=1 if an error is detected during the conversion, 0 otherwise. This can be used for batch file processing. See STO.bat.
